

## **telematique**

Since 1998, Sven Gareis has been magically captivating his audiences in the club and art scene of Europe with video installations, live performances and VJ presentations. The goal of telematique is to generate the image scenarios, which have a close relationship with the venue and its architecture, and visualize great live music.

For this fact the artist constantly develops new work techniques and tools. The final product is elegant and surprising; a landscape of images, which match the music in a precise, abstract and beautiful way. They merge with avantgarde film material.
